I have a major problem with the AD7714. I m using channel AIN1 and AIN2 with a gain of 1 for an input that varies between 0.1 to 0.5 V. I always get an output of 3255255 or 255255255 or 195255255. Can anybody help me out.

Did you verify the digital interface? Try writing something to a R/W register (e.g. Filter Low), and see if you can read it back.
