Thanks for the suggestions!

No level shifting required. All switching happens between the MCU and RS232 drivers. System is 3.3V....

I looked at the MAX303 (it's got some funky supply requirements, made more for higher V's.)

But looking at the category in Digikey (IC analog SW) gave me some good search criteria and I've found a lot of good options. Nothing yet with 2 x 1:2, but better power than the 4052.

Thanks again,

John
