<bill.slowman@xxxxxxxx>

10MHz crystals are sold with a $\pm 0.1\%$ absolute tolerance.

** By whom ?

All the ones I see have 20, 30 or 50 ppm accuracy.

Equates to 0.002%, 0.003% or 0.005 % tolerance.

32768Hz
watch crystals aren't that good (if I remember my Farnell catalogue
correctly.

** They have 20 ppm @ 25C accuracy too, I'm afraid.

..... Phil
