Hello,
I need to record sound coming from a large space (a room)

At what volume level roughly ? Similar to ordinary speech for example or much quieter ?

with a
microphone connected to a PC soundcard. So far the results have been disappointing, and I've been suggested that I need to preamp the microphone.
Can you kindly suggest a <VERY SIMPLE> circuit design (I'm a begginer)?
I don't need anything complicated, since I can sustain without problem reasonable amounts of noise and distortion.

What kind of microphone ?

The cheap type that plugs into your PC soundcard or a 'decent' low impedance balanced one ?

Graham
