On a sunny day (Wed, 31 Jan 2007 20:14:11 GMT) it happened D from BC <myrealaddress@xxxxxxxx> wrote in <nss1s2leabt9a8rga2amga5op651ia3pks@xxxxxxxx>:

You must have really strong brain waves ;-)

It's from too much lossy thinking.. My brain waves are so strong that my head overheats from I^2R losses. I might need to put heat sink on my head.. :)

I didn't mean the electrodes go on the head but across the heart to pick up the brain trigger signal. I don't know the dominant signal... Could be the nerve to the heart.. Could be the heart itself or both.

D from BC

My recent understanding is that the heart triggers itself (an internal feedback loop).

I dunno if there is a signal from the brain too, but things like adrealine do affect the speed it runs.

But I am no doctor, so...
