On a sunny day (Thu, 8 Feb 2007 07:01:33 +1030) it happened "mark krawczuk" <krawczuk65@xxxxxxxxxx> wrote in <45ca3720\$0\$83734\$c30e37c6@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx>:

hi , can anyone point me in the right direction for a eprom switcher schematic ?

this is what i want to do :

i have a engine ecu which contains a 27c128 eprom , i want to be able to switch between 2 .bin files (maps) while the engine is running i.e on the fly . i presume i will have to use a 27c256 eprom .?

any help appreciated.

mark k

Well, if it is just for yourself, solder 2 on top of each other and switch the OE lines (you'd have to peel of the bottom ones OE line from the board), and gate these with the board signal.
