If they're incapable of explaining it properly what do they expect ?

The Guradian's now talking about Antarctica melting,  
<http://environment.guardian.co.uk/climatechange/story/0,,2016243,00.html>

yet even Greenland's pretty much untouched ! Indeed some say the ice is getting thicker because there's more water vapour around to create precipitation. Ditto Antarctica.

If the Arctic ice melts it's not going to raise sea level as much as an \*inch\* !  
If AGWists scream "Wolf" ad nauseam and nothing happens whose fault is it if they make their case look stupid ?

How about considering the positive aspects of a warmer climate. It looks good to me. No heating on here right now for example. That'll reduce my carbon emissions for starters. Longer growing seasons etc.....

Graham
