Hi to all,  
I'm looking for a version of spice which runs  
under Linux.  
I tried to use gEDA with ngspice but it  
doesn't work.  
I've tried to use it a lot of time.  
Thanks to all  
Franco

LTSpice runs fine under wine.

Where's the "Wind for dummies" page?

^^^^

Wine, of course.

Just install wine, on this debian system I did "apt-get install wine" and  
it downloaded and installed wine.

download ltspice, the url is <http://ltspice.linear.com/software/swcadiii.exe>

then do "wine swcadiii.exe" this will install ltspice

then do " wine 'c:\Program Files\LTC\SwCADIII\scad3.exe' " when you want to  
run it – it's probably convenient to create a script or launcher that does  
that to save typing.

Re: Linux and spice

Bye.
