Right, checking on linuxpackages.net reveals that this version of wine is meant for 2.6 kernels and the error occurs if you run with a 2.4 kernel. So you could upgrade to a 2.6 kernel or roll back wine far enough to be 2.4 kernel compatible. I run 2.4 kernel so I have to make this decision too. Not sure which way to go yet.

I've not heard of any downsides to 2.6(vs 2.4), the pre-teens were a bit flakey, but since then it's been good
