Now we have to replace the SLA with Li-Poly or NiMH or other non-lead technology, but it gets tricky.

[...]

What's the "have to" business?. Is it specific to your industry, or are we all going to be buggered by new regulations?.

Personally I wouldn't choose to specify anything other than sealed lead acid. It's Victorian technology but a damned sight more reliable/predictable/cheaper than the newer fluff.

RoHS lead and cadmium are out. We had a good run with SLA.
