How to Fix a Rats Nest of Cables at a Workstation?

I have a ball of AC cables and adapters under my desk..  
+ video cables, USB cables, keyboard etc...  
I'm using 14 power bar outlets (from 3 power bars) to power up my workstation + other gizmos.

It's unfortunate a ball of wires hasn't become trendy home decor :)

Anybody have some tidy solutions?  
I thought of making a mini "electrical room" cabinet... :)  
D from BC

Hooks on the underside of the desk. Or Panduit. Or a rug.

Why isn't everything nuclear powered and wireless?

John

Rug??

Re: How to Fix a Rats Nest of Cables at a Workstation

I just throw a rug over the wires so I don't see it? :)

Yes.

But I think you mean that rug pieces are stapled down to guide the wires..

No. Won't keep your toes warm, either.

John
