You're probably right. I found a page here:

<http://www.anatekcorp.com/faq/applianc.htm>

Which say a diode with label: ST; BZV; 47C; 24; C848 is a ST Micro zener, BZV47C24, rated 24 Volts, 5%, 2 Watts.

In my case, the component may be a bit different (I'll have to double check on the underside of it).

.
