Hi guys,I just bought a Logical Devices programmer and the adapter to program chip ST M58LW064D ,but the same adapter is not working for M28W640FSU.I can read it find but Device ID is wrong.

These adapters are \$350 US a piece and i think its a scam.The Chinese cheap programmer are doing the same job for \$350 but it include programmer and adapter.Instead of doing translation on the board,the programmer do it internally.You only need 1 adapter to program all let say BGA 64 PIN.

I think XELTEK is doing big money with these adapter and i think people should share the pin out of adapters

I can trade my pin out of the XELTEK adapter # SA655A-B054A-T064F001Y for the SA655E-B090A-T064F001Y

If you intent to buy 1 programmer,be really carefull on your choice.

.
