Has anyone figured out how to "un-train" a spam filter when it becomes too strict? Mine now catches all email from a certain project, despite the fact that the sender is in the address book and junk mail controls are set to exclude any email from senders that are.

IMHO spam filters are a pain in the ass. They always delete the e-mail from your most important customer or remove the files you need most.

My e-mail address is provided on a need-to-know basis which works quite well :-)
