Trying to find out what screw thread is used to fix hard disc drives into a PC chassis.

I've sent an email to Seagate, but no reply so far.

It seems a simple question but I just can't find the answer on the net.

I do know that the thread is not the same as regular PC chassis screws even though the screw looks similar.

Anyone know for sure?

6-32 in most cases. All other fasteners on drives are usually metric.

6-32 is larger I think.
