RS232 is weird. MS offers a mscomm32.ocx routine but it comes with severe licensing restrictions, meaning it cannot be used with all VBA versions that came with Office. Probably because Bill doesn't want us to. So I am using the API now, with mixed success. But heck, if it was too easy there would be no learning experience.

Other than the OS, which I have to have to run my scientific app's, I avoid Micro\$hit stuff like the plague.

Have you heard the controversy developing over the "iphone"?

Seems Apple got sucked in to have it only work/sync with Outhouse
