Re: Productivity – Norway leads the table.

Heck,
out
here
even
milk
is
sugarized.
Found
that
out
just
in
the
nick
of
time
when
we
had
visitors
with
a
diabetic
kid.

The milk
that we buy
contains
milk,
Vitamin A,
and Vitamin
D. Milk of
course
contains
lactose, a
sugar.
Human
milk has
more
lactose than
cow's milk,
so when
babies are
fed cow's
milk,
additional
lactose is
often added
to bring it

Re: Productivity – Norway leads the table.

Re: Productivity – Norway leads the table.

up to
"human"
standards.

But here the mom of the boy
tasted it beforehand and
realized that it is
much higher in sugar than
regular milk in Europe.

Not very scientific!

It would have caused a
problem with the diabetic
kid. I forgot what the
container said,
something really high like
2% or so IIRC.

Human milk is about 7% lactose, and cow's
milk is about 5.

John

Which is why you can find lactose added to formula (not
stuff sold as
'milk', AFAIK) in order to mimic the lactose content of
breast milk.
Maybe Joerg is referring to formula (aka, in some places,
'baby
milk').

Nope, milk right here from the supermarket. It does taste a sweeter than
milk from a European supermarket. Also sweeter than milk fresh from the
cows over there and that tells me something must have been added.

If something has been added, Federal law requires that it be on the
label.

Re: Productivity – Norway leads the table.

If you add it through the animal's mouth, bloodstream etc. (eg. hormones) you don't have to put anything on the label, right?

I checked a bunch of milk cartons, and the only additives are vitamins A and D. Cows differ, so maybe US cows have been selected and bred to produce the kind of milk that appeals to American tastes.

Maybe they have wimpy cows in Europe.

John

Wimpy cows would be for making burgers.

Best regards,
Spehro Pefhany
