I wish I could buy
gold-plated copperclad...
the copper looks great
when you start, but goes to
hell in a few days. Hey,
maybe a pcb house
would plate some
copperclad for us. THAT
would look classy.

Clean and shine it with Brasso, rinse well,
rinse with isopropyl, rinse
with acetone (if you don't have any
acetone-vulnerable parts), dry
thoroughly, and spray with Krylon.

That'll leave an awful stench next time you make a change.

The krylon is acrylic - it should come right off with a little acetone
or ethyl acetate. :-)

Yeah but who does that? People realize that R13 should really have been
to GND instead of Vref, flick on the Weller switch, phsssst ... "Hey,
Leroy, did your stogie roll onto the carpet again?"

Re: Prototyping?

Well, I wouldn't expect you to take a prototype that's not even done yet, and dress it up for presentation! You don't lacquer it until it's ready to go on display, silly. ;-)

Cheers!

Rich
