Movement sensed wireless video cameras i hear are cheap nowadays. Connected to home security high pitch alarms may help give early warning systems.

Maybe signposts with some of them around the home doors can help discourage rogues from an attack. Recording their faces by such systems may keep them away. Or possibly better nothing there.

Some of the valuables these people take are my vehicles, motorcycle, computers and other basic electronic stuff, cameras and so on . I cannot put these in a bank vault. There is no actual insurance policies in the country where i will relocate, it is in a developing country. From what they tell me the Insurance give you a small fraction of the cost of what you lose over there.

A lot of sun and nice vegetation over there, very little pollution but you pay a price for those commodities.

Moreover then theft attacks can be launched anytime even during the day.

I would like to project a fence with a high voltage to keep of thieves from my land and house plus valuables. Is anyone here capable of providing suitable input for this project. Minimum or maximum voltages precautions, such as. Kind of transformer etc. Note I don't want to harm much anyone because it would be dangerous and against the law. We don't have electric chair here but it is frowned upon by the law. Something similar to cattle protection circuit on fences you know a slight shock to keep the diots away.

Before you waste your money, check local ordinances and codes. You might

Re: anti robbery fence

not be permitted to build any such thing, in which case you might want to move, first – it's a lot cheaper than paying to build a fence, and then paying fines for having built it, and then having to take it down again.

Won't make a bit of difference to professional thieves, anyway.

Describe and build it ONLY as an electric fence to keep animals in, and borrow an animal from time to time if need be to maintain that idea as valid. The right animal(s) might make some impression on thieves, but try to stick to ones that make an impression on thieves by making a fuss when disturbed (such as geese), as opposed to ones that pose more of a threat to your own family, since your own family will be around them all the time, and professional thieves will just drug or kill "attack animals" before looting your house.

Use standard animal fence electrics, and standard animal electric fence warning signs for humans. The animal fence chargers are already designed to be "safe" for humans. No self-built unit will be acceptable to your insurance company or local officials, so don't try to build the fence charger yourself.

Practically speaking, put your valuables in a bank vault, and relocate to a less crime prone area if that does not solve your feeling that you need to put up an electric fence for robbers.
