1. RS232 to RS485 converters work fine but I am out of serial ports due  
my IT departments drive to use PCs that have fewer everthings.
2. BB-elec Ulinux USB converters do this also
3. If you keep the gin in the freezer and put pop a couple olives in  
your mouth you can skip those tedious shaker to glass to mouth steps

If you are out of serial ports, go to ebay and search for "edgeport". The edgeport USB to serial port adapters are very good professional products. A vodka martini straight up is a an upscale way to say "give me a glass of vodka". Works for me. Per the late Hunter S. Thompson, "Always trust your bartender!"
