If cellulose could be made to work, why all the hype about using the corn stalks? Why not just use waste wood, leaves, bark, paper, and cotton?

I'm guessing that it would serve us better in the short and long term to increase efficiency in the way we use fuel, instead of trying to sustain our wasteful habits.

I guess it all boils down to what lobbyists find attractive.

I can tell, you swallowed the red pill!

Warm regards,
JS
