Thanks Adrian.

I have one of the Sony displays, and I find it far from sunlight viewable -- from memory about 25% reflective and contrast ratio of about 10-12. This however may be the kind of display I need -- size, power consumption and interface are all OK.

<http://www.goldmine-elec-products.com/prodinfo.asp?number=G13752>

and it is definitely full sunlight visible (and color)
