Hi,

I have an application that needs 4 isolated secondaries all with about 1kV isolation, for supplying floating fet gatedrivers. Does anyone have a transformer part that would be small and still UL certified for 500Volt pin spacing, like 0.1" or more.

How about two of these?

Triad would be a good place, too, but their web site has been screwed up so badly that it's now inaccessible (at least for me).
