Now, if you could tell me how to add a router to my RS-232  
line that goes  
to the modem...

You can use a WiFlyer ([www.wiflyer.com](http://www.wiflyer.com)) to \*replace\* your mode and get a  
router in the process... or, as others have suggested, use a router that has a  
"dial back-up" feature and just always use it in "back-up" mode.

Maybe talk to Jim T. since he ditched his SMC router a while ago on  
account of needing too many power-cycles. Possibly it still sits in his  
garage.

I tossed it because of its repetitive hanging.

You can buy a very good router for < \$40.
