[. . .]Make sure V_g is right.

(Completely OT)

Do you have a leading space in the username on your new account?
Google's archive is doing the strangest things with your posts.

On the front page of the group
<http://groups.google.com/group/sci.electronics.design>
you show up as "Anonymous".

Once the thread is opened,
http://groups.google.com/group/sci.electronics.design/browse_frm/thread/f48025bb1531284e/affbaced
your username disappears in the Thread frame
as well as in the Body frame
To see who posted, I have to click ****More options****.

I checked, no leading space that I noticed.
And yeah, it's not looking pretty on Google groups..
I was set up ok before. Then my system needed to be redone and had to
reload all the software.
I've made some changes for this post..
Maybe I have it right.

Re: current through FET

I put in my old 'spam this' email address.

Google groups is now appending to my usenet Google profile that goes back more than a year.

'D from BC' shows up on the top line too for my posts.

Let me know if it's still fumbled.
