Oh, yeah – what website????
<http://www.abiengr.com>

Got rid of the scrollbar in the top (& second) frame, but I don't like the fat bottom margin. Anybody know how to fix those?

Thanks,
Rich

Nice improvements. Lose the "Pentium 450" on your AutoCAD workstations. They are due for an ordinary class upgrade now anyway. Hell maybe mention the AutoCAD version number if it is not as antique as the workstations you are using for it. Add Bentley MicroStation to your cad lineup, it is less expensive and more capable.

Heck, i might give it a thorough review soon.
