would drop
that.
IT HAS NO
BEARING
WHATSOEVER
on whether
he'd be a
good
President.

Re: Sarah Palin – hot or not?

The way he behaved has bearing. Gore and Kerry both played up their "military experience", which was a sick joke.

McCain was sorely tested, and he showed he's not a coward. The Presidency is important, and one lesson I've learned is that you can never trust a coward.

I also have a really good friend with a MIT double-doctorate who can't even run Excel (or most other Windows apps for that matter). ?Now, is his "experience" at MIT relevant or not?

Wow, people go to MIT to learn how to drive Excel? I never touch the POS, but then I didn't go to MIT.

John

I must be missing the logic here.
What does imprisonment have to do with cowardness?

As I said, what matters is how one behaves.

Is a POW a steeling ground for tremendous personal resolve?
Is that what you're trying to ascribe to McCain?

That he's not a coward.

Re: Sarah Palin – hot or not?

And do you also assert that because neither Obama or Biden were POW's that they are somehow not equally resolved?

We can't tell. You only learn about a person's courage when they are seriously tested. Passing the bar exam isn't a suitable test.

As for Excel, most engineers use it. ¿How can you possibly function without it in this day and age without it??

I use Spice occasionally. If I have a serious computational problem to solve, I write a program. And I leave the bean counting to the bean counters, who use serious accounting software. Spreadsheets and PowerPoint are more likely to switch off thinking than inspire it.

Most of the engineering spreadsheets that I have seen had at least one error, which didn't stop the authors from believing the results.

¿ Unless you're one of the

stoneage engineers I mentioned previously. ¿(Which would seem to explain your comment.)?

The point of that (which you obviously missed when you elected instead to simply attack what you could not understand) is this: ¿Experience from the 60's is not all that relevant today.

Character, from whatever time, is.

Sorry, but that's just the way it is. ¿ The world has changed. ¿Keep up or get left behind.

Here's "stoneage" for you:

Re: Sarah Palin – hot or not?

Ha!! VME backplanes.
I would classify that as at least the Bronze Age.
Now S-100.... There's stone age. :)
