Dont know about anyone else, but I found it quite
dissapointing.
Perhaps round 2 in 23 days (correct me if I am wrong) will
be much
more impressive...

Live webcams below are impressive:

<http://www.cyriak.co.uk/lhc/lhc-webcams.html>

some more stuff here

<http://www.nature.com/news/2008/080905/full/news.2008.1085.html>

such as

0.00000000047 grams = total mass of protons circulating in the LHC
at any time.

362 megajoules = collective energy of LHC's protons at top speed.

martin

Re: The end of the world

low mass & big joules, lets you appreciate how fast they're going.
