This short video describes an Australian inventor discussing his magnet–motor household generator. The claim is that once started with a small battery, the device can basically generate free electricity. I recall that 24kWh/day was quoted in the video, but they may have meant 24kW. (30kVA)

Anyone care to comment...?

They have even a patent in some countries, which explains the construction, so everyone can build their own motor and verify it. The inventors website:

<http://www.lutec.com.au>

The patent:

<http://www.google.com/patents?id=gdgNAAAAEBAJ&dq=6630806>

But looks like it doesn't work:

Re: Magnet–Motor (Free electricity?)

If anyone claims to have a "free energy" device then all they have to do is show it producing excess energy \*after\* running it using some of the tapped off output – no external input.

And no consumable internal power source (eg. batteries).

Best regards,
