I found the following reference on the Microcap spice simulator website but the link to the paper is dead. Are you able to make this reference available?

SPICE Analysis of Crystal Oscillators – Michael R. Monett
This paper describes a simple method of starting a high-Q crystal oscillator at full amplitude, where it quickly settles into steady-state operation. The new method can provide high resolution waveforms over 4,000 times faster than before.

Yes, I moved everything over to DSL. Google usually finds the new link in a couple of weeks or so, but I replied to your email with the information you requested.

Can you share the URL with the rest of us ?;-)

Yes, I'd like to see it as well. Thanks in advance, Mike.
