Better
yet,
answer
on
the
first
ring:
"This
mailbox
is
full",
then
hang-up
;-)

Even faster
and lower
power... Do
what I do
and unplug
the (only)
phone and
stick it in
the drawer
(the line is
for DSL).

Any such answer attempt
will not work; as marketeers
that call (me)
hang up on or before the

first syllable.

Who cares? The phone is disconnected,
sitting in the drawer. Let
'em call all day. Please!

Disconnected phone == impossible for any friend or relative
to call you.

Wrong. Cell phone.

Wake up.

It must be hard, but *think*.

Ahhhhhhhhh.

If i could connect my computer to a cell phone for internet service,
AND no have to \$pay\$ more than \$40/month for service, not counting ISP
which MUST NOT be locked to internet access, fine.

I say "NOT locked" because Qwest DSL locks you into using whatever
service they "give" (MSN i think); ComCast does the same crap.

I have taken months to find a decent ISP; "decent" for me is (1)
Webmail and NOTHING in a e-mail (part of their browser) client, and (2)
ASCII representation – ALL HTML and Java !stripped! (or !ripped!) out.
The possible advantage is that one might even get high speed internet.

Go back a few posts and read again. Then think for a few minutes.
It'll come to you.

.
