What kind of equipment are you trying to talk to? Is it old enough that is meets the IEEE-488.1 standard instead of IEEE-488.2?

What type of computer and GPIB controller are you try to use? What software are you trying to use with it?

You may get more help if you post to the newsgroup: natinst.public.gpib.general. It is the place to ask if you are using a National Instruments controller.
