Hi,  
my friend is trying to mend my external drive/enclosure. I said I'd try to find a schematic for the pinout on the ribbon cable. The cable seems to be different than the standard one. There seems to be a lot more and finer wires, though the connector is standard. Please can anyone offer any advice?

Regards,  
Mike

Is this a joke?

How the heck can anybody here help you with so little information?

E.g. is it SCSI, USB, Firewire, Ethernet, something else?
