I am looking for a few system disks for an HP 1661C logic analyzer. In particular, I would like a copy of the system performance verification software (Sys PV) which may or may not be a part of the main system disk. The documentation is not clear and there doesn't seem to be any part number for this disk. I would also like a copy of the symbol utility software (E2450A).

My LA has firmware version 1.01 and a copyright date of 1992. I would be interested to know if any, more recent, firmware upgrades are available as well.

Agilent's web site doesn't appear to have any of these available for download and their FTP site is a ghost town. It would be nice if they offered up all of the software tools for these LAs for free download considering that the 167x series has been out of support for over a year.

I can send you what you are looking for.

If this is a good email address to receive a 2 mega byte attachment let me know.
