does anyone now of a device that has wireless access at least G and provide both usb and ethernet?

i want to connect a remotely located printer and usb hard drive to my wireless net few rooms away

i can find wireless e devices and wireless usb but not one w/both perhaps i overlooked

anyone know of any??

thanks

Why would you want to do such a thing?

Put the usb hard drive on a real usb port on any computer on your network.

Disk data rate would be MUCH faster on the local machine and probably twice as fast to any other machine.

Wireless is normally half-duplex. You don't want two wireless connections between the drive and the user if you can help it.
