Not sure if I have the proper group, but I'll give this a shot.

I now use an outdoor antenna. Some channels come in perfect and some not too great and some really bad. Will the DAC (digital to analog converter) make poor signals come in better, worse, or the same?

When cell phones went digital it was said that calls will come in clearer, but they will also give less warning when in an area with poor reception, they basically go from good to dead.

Thanks,  
Tony

Yup, and the same applied to DTV  
depending on the receiver , side effects may vary.  
image spotty in places etc..
