Hopefully this isn't too OT here, but I couldn't really find a newsgroup to fit this, and my searching showed a couple similar questions here. I just moved into a new house, and the former owners left 2 older computers in good sized tower cabinets. I would like to know if they are of any practical use and if it would be any benefit to me to check them out or toss/sell them? I only know PC's/Windows. What OS, and any way/benefit on hooking them up to a PC?

The name on the computers state "Management Graphics" (Minneapolis, MN 55420), and on the front side is an opening with several circuit boards inside, as well as what looks like a 5.25 floppy drive, and another undetermined bay next to it. It has buttons labeled "Restart", "Halt/Enable", "On" and "Off". On the rear it says Serial: 517 (I think, hard to make out, may be 514 or 511), Model: TTS/PLUS, it has 4 ports that resemble parallel printer ports, and say "Terminal", "Tablet", "Modem", and "Host". Under those ports there are 3 round jacks that say "Red", "Green", and "Blue" (for a monitor?), and under that 3 similar round jacks, two that say "Sync Loop" and one that says "Sync Out". The other computer looks identical except it says Model 518. Also a "UL Listed" sticker on the back that says "Graphic Workstation 46N0". The units are about 27" high (on roller wheels), 14" wide, and 20" deep. I have a picture of the front of the 518 at <http://www.geocities.com/dannykewl3/ManagementGraphics1.jpg> and a closer in shot of the rear connectors at <http://www.geocities.com/dannykewl3/ManagementGraphics2.jpg>

Thanks in advance
