I wondered if anyone could help me identify this connector I am having trouble sourcing.

The connector is still being used in new vehicle applications and has been used since about 2001/2002

Housing dimensions are 35mm long x 20mm x 15mm

The pins are rear loaded, with seals and measure 1.8mm x 0.6mm

The only identification is the name AMP on both the outer housing and the inner pin retainer

I can't find anything remotely like it on the amp (tyco) websites

Any responses to the newsgroup please, all email to my usenet posting address usually gets dumped.
