Well, it worked last time, so here goes...

Looking for a 1K linear taper pot with SPST switch and bayonett style contacts (for the pot part, of course), for mounting onto a PC board.

Seems

everyone I find makes this part with "eyelet" type contacts. Prefer "standard" 15/16" with 5/16" diameter shaft, maybe an inch and a half long (the shaft, that is.) Seems pretty mundane, but I can't find it. Anyone have any ideas where I could find this?

Cut off the eye?

Yeah, may have to do something like that. Just not my preferred mode of operation.

Thanks for the input... Take it easy...

Dave
