As recommended in the other u/g. Make sure you are capable of actually doing the repair professionally or make sure the tuner card you are using is considered vulnerable due to the experimentation you may be doing. FWIW improper repair and modification techniques can render the item useless. <tomwinto@xxxxxxxx> wrote in message news:1186783487.149639.267820@xx

Hey everyone

Ive got an old ati tv tuner card which has always had a problem with noise bars. It works perfectly fine but the noise bars have always bothered me.(I could buy a new one but Im cheap) Anyway, according to this:

<http://archive.avforums.com/avs-vb/s...pagenumbe> r=1

there is a mod that can be done to one of the chips to isolate it against noise. I don't know much about electronics, but would like to give this mod a try. Anyone able to give a clearer explanation of whats involved and/or able to link to a site with a tutorial or explanation of something similar (with pictures)

Thanks
