can anyone help me with a simple circuit for charging a capacitor to 24 v from a pp3 9v battery ?  
i can solder an read circuits but that's it.....something i could make on a breadboard / stripboard ? it would need to have an led illuminate when the cap is charged

not sure how many uf cap would be

any help appreciated (i'm in the uk)  
dave

I'm not sure it would be safe to answer your questions. You don't seem to be able to handle the idiom, punctuation, grammar, or technology. (Not led, but LED "Light Emitting Diode", for example.) A few more years of education, perhaps? No offense intended....of course.

It's spelt "offence" :-P

The politics of milk production:

Socialism: You have two cows. You keep one, but must give the other to your neighbour.

Communism: You have two cows. The government takes both and provides you with milk.

Fascism: You have two cows. The government takes both and sells you the milk.

Bureaucracy: You have two cows. The government takes them both, shoots one, milks the other, pays you for the milk, and then pours it down the drain.

Dictatorship: You have two cows. The government takes both, then shoots you.

Capitalism: You have two cows. You sell one and buy a bull.

## Re: simple circuit for charging a capacitor

Democracy: You have two cows. The government taxes you to the point that you must sell them both to support a man in a foreign country who has only one cow, which was a gift from your own government.

Corporation: You have two cows. You lay one off, force the other to produce the milk of four cows, then act surprised when it drops dead.

California: You have two cows. The State tells you how to milk your cows, when to milk your cows, how much to milk your cows and the most that you can charge for the milk. You go broke and sell the cows. The State calls you greedy and blames you for the current milk shortage.
