Most likely, the panel is not being addressed properly. This can be the harness into the panel, or the driver matrix board, or the panel itself. You will have to purchase the service manual from Philips. You will also need the proper tools and test gear to work on this. I would suggest you get an estimate from Philips. I have my doubts you will be able to service this yourself, unless you are very lucky.

news:a2KAc.4889\$GQ3.120018@twister2.libero.it...

I found this LCD projector, philips proscreen 4600.

Testing it I found that on the image all the red areas are surrounded by

extra-pixels orizontally,more on left side (something like | | |

||||)

Any advice for me (i.e. where to find troubleshooting info's, manuals,

or -if I'm lucky- component to check)?

Thanks

Max
