Still you must go back and read again. The difference is not discernable on the average home tv.

Yeah! I've seen such crap in the retail outlets. A kit form of a5.1 theatre is mostly crap with compromises inherent.

You can't honestly say that a small polystyrene box you can hold in your hand is actually a sub woofer.

And the tiny ass cubes they call mid/highs that are used for the front and rear stereo channels are even worse.

True you and I can build a killer 5.1 system for less, but most consumers don't have the knowhow or desire to spend all the time required to build it themselves.

In order to have quality THX certified QUALITY sound in their dens the consumer is looking at a couple of thousand bucks for an out of the
