Re: RCA Chassis CTC197CE2, Model F32683SB

The jungle IC is an LA7612N. TV has sound but no video & no OSD.

Originally TV would click three times and do nothing. I changed the flyback. Now I have a raster & sound, but no video. Does anybody know if the LA7612N has the same pinouts as the LA7610? If not, could you tell me what pins have the RGB outputs? (I may also have a corrupted eeprom, however TV turns on, changes channels, & volume functions normally.)
