Hello,

It has been a while since I aligned a TV receiver and I was looking for a little refresher on using a pattern generator.

I am using a Conar test pattern generator.

Coming out the back there is an antenna terminal clip labelled "RF" and also 4 alligator clips with red, green, blue and black rubber insulation on them.

I think they are labeled "Guns".

With the "RF" clip on the antenna terminals I get a blank black raster.

My quandry is I can't recall how to connect the 4 alligator clips to drive the individual guns.

BTW: The receiver is a Sony KV-1913.

Thanks for any help.

Carl
