Hi all,

I started out with a dead monitor, which kept blowing the line transistor, changing the transistor (and latter LOPT) cured this, though Q719 (mosfet) went short and was replaced (not by me) with another one, Does anyone know what mosfet it was since the orig. one is long lost, It had in there a N-chan FET, though its blown a 1 watt resistor connected to it, so I only assume its supposed to be a P-chan fet, but can anyone tell me what the original fet number is ?

TIA,
Chris
