Of course, the first thing a drive recovery service does is swap the logic board from a working drive....

*>Mark, that will not recover his dead drives, gent already said he placed
>them into another computer and they were still not operational. Only option
>is to find identical drives and try swapping the logic pcbs, still modrately
>questionable. Third, but most expensive, is to send the defective drives to
>a recovery company who have the techniques to recover the data.*
