Hi I have picked up an InFocus LP420 projector which appears to have a psu fault. The lamp is new and the unit was working for about 1 hour and then cutting out. Now the fan starts up and sounds as if the voltage is increasing and decreasing. I have opened the unit and resoldered various dry joints which has made no difference. I can't find any info on this model for a circuit etc does anyone have any pointers or help.

TIA

Jim O'Donnell
