Anyone willing to fix a cube for only \$330AU is a very brave servicer. Those are the most poorly designed, inefficient & FLAMMABLE amps of all time. Scary as hell. Even more flammable than Bob's infamous Phase Linear crap. Might be almost forgivable if the piece of incendiary crap actually sounded good, but it doesn't. What is REALLY scary is that the Sunfire amps are a direct evolution of the cube. Scary as hell AND expensive.

Personally, I turn down every client that asks me to fix a cube. No way I want to warranty one of those abominations.
