- 

I have a NAD C370 Amp with a 523 CD Player through some KEF Speakers.  
A while ago I moved to the U.S. from London and I am now looking to  
have my stereo sent over.

What would I need in order to adapt to the downgrade in electrical  
power? Will it affect the sound quality? Any specific transformer  
suggestion? And would the speakers be okay?

Many thanks,  
HG

.
